Company Profile

Metafix, Inc. is a company whose innovative technology has brought it to the forefront of photochemical recycling and silver recovery. Established in 1987 and based in Montreal, Canada, Metafix provides systems and services to the photoimaging industry; comprised of the Medical/Industrial X-ray, the Graphic Arts/Printing and the Retail/Commercial Photofinishing sectors.

Our primary business is the design, manufacturing and marketing of equipment and services to address following applications:

- Reducing photo processing chemicals, effluent and wash water;
- Recovering silver from photo processing solutions.
- Drain maintenance and inspection.
- Effluent neutralization and discharge.

Our proven track record has led Metafix to a dominant position in the north american market and earned us an increasing presence in the international marketplace.

Since our beginning, Metafix has grown significantly, both in range of product and global profile. Our business spans more than 30 countries, with marketing, sales and service organizations in Canada, the United States, Latin America, the United Kingdom, Europe, India and Asia.

Metafix sells and services directly in our domestic markets. Over 60 percent of Metafix systems are sold outside of Canada, through the following channels:

- Metafix is represented by a worldwide distribution network. In conjunction with our North American dealers, we also provide direct sales and service to the photofinishing market — wholesale labs, large professional labs and minilab chains.
- We private label our systems for several national and multinational companies that serve the various photo imaging sectors.

Metafix, Inc. is an innovative environmentally-conscious company whose products and services reflect its philosophy to reduce, reuse and recycle on-site.

Metafix is an ISO 9002 registered company. The ISO 9002 level of accreditation is awarded to companies that meet specific quality standards set forth by the International Standards Organization. ISO 9002 insures quality standards for all areas of manufacturing, training, purchasing, service and product performance.
